

With the volatile nature of today's threat landscape and increased dependence on cloud applications, security is more important than ever. Yet too often it is an afterthought for many organizations. The proliferation of networked applications highlights new challenges with securing your network edge; with lost or leaked data, your company's reputation is at stake. FirstLight's high quality, fiber-based network solutions, paired with its Managed Edge Security solution, enable your business to securely operate with confidence.

## What is Managed Edge Security?

IT teams are often spread thin, leaving businesses unable to fully leverage the benefits of the latest technologies. Managed Edge Security is FirstLight's managed security solution that enables your organization to easily control applications, enable compliance, and defend against the latest security threats. This streamlines formerly cumbersome responsibilities, granting IT teams the freedom to concentrate on what they do best: developing technology that provides a competitive edge.

Traditional security techniques are no longer enough to ensure complete network protection. FirstLight's next-generation firewall solutions give admins complete control over users, content, and applications. Managed Edge Security's perimeter security service defends your network by providing stateful traffic and application inspection, access control, and intrusion detection and prevention.

As a managed service, FirstLight provides a comprehensive solution, combining its high quality, fiber-based transport services along with hardware and support as a single, cost-effective monthly fee. With up to 24x7 advance device replacement, software updates, and proactive monitoring and alerts, rest assured that FirstLight's unparalleled support team is here to help your business thrive.

 <b>Scale</b> Simple to buy, easy to upgrade	 <b>Optimize</b> Deep insight into how your network is performing	 <b>Protect</b> In-depth security to protect you from cyber threats

## Features and Benefits:

- **Intrusion detection and prevention** protects critical network resources from the latest security threats and vulnerabilities.
- **Content filtering** enables users to enjoy the benefits of the Internet while protecting against inappropriate or harmful content and enforcing business compliance requirements.
- **Advanced malware protection** defends against malware using the latest threat intelligence.
- **Identity-based firewall** automatically assigns firewall and traffic-shaping rules, VLAN tags, and bandwidth limits to enforce the right policies for each class of users.
- **High availability** provides device connection integrity in the event of hardware failure.
- **Application visibility and control** identifies applications in use and prioritizes traffic based on business requirements.

## From implementation to support, we've got you covered.

From site assessments, remediation and installation, to cutover and monitoring, FirstLight provides a turn-key managed security solution. With flexible support options, FirstLight can provide up to 24x7 support and 4-hour advanced device replacement.
