From ransomware and DDoS attacks, to malware and spyware, network security is becoming harder to manage, and attacks are more sophisticated than ever.

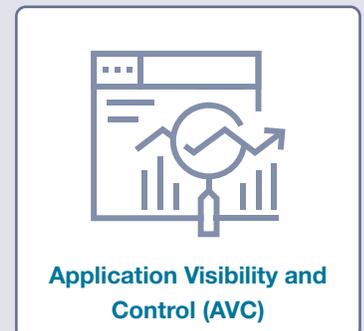

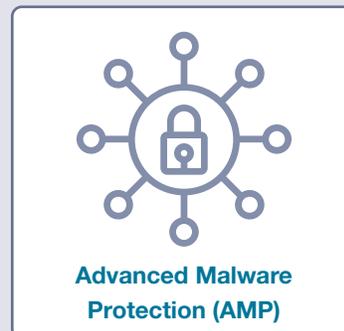

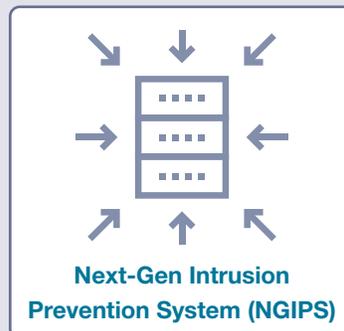

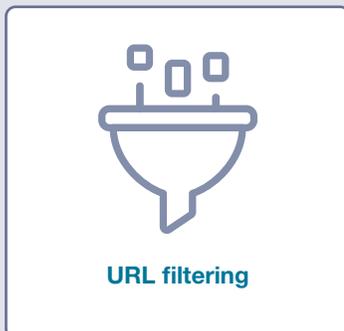

According to one recent estimate, 63 percent of companies said their data was potentially compromised within the last 12 months due to a hardware or other attack,* and businesses suffer on average about $200,000 in damages per attack.**

A simple firewall is not enough to stop most attacks, given that many occur because of lack of updates to software and hardware patches, or attempts to perpetually try to outfox firewalls.

There is an alternative: FirstLight's Managed Next-Generation Firewall service.

Our Managed Firewall solution offers enhanced threat management through a comprehensive, cost-effective security solution backed by Cisco's premier threat intelligence technology, FirePOWER.

FirstLight takes much of the complexity out of securing your enterprise and keeping up with new patches and firewall updates. With FirstLight, you get all the necessary support and services you need to operate a robust firewall, including:

URL filtering	Next-Gen Intrusion Prevention System (NGIPS)	Advanced Malware Protection (AMP)	Application Visibility and Control (AVC)

FirstLight's security experts monitor your firewall remotely and can help mitigate any potential threats, monitoring your network traffic to determine normal traffic patterns and anomalies. When unusual or suspicious activity is detected, you can be quickly alerted and threats can be addressed.

Why FirstLight?

- FirstLight offers the cybersecurity you need at a price you can afford.
- Options scale from monitoring a single server to multiple servers.
- Various options including reporting frequency and alerts keep you in control.
- FirstLight experts are available 24x7 guarding your servers and data, and ready to answer any concerns you have.
- FirstLight is a Cisco Managed Partner with years of experience using Cisco solutions.
- Leverage FirstLight's low-latency cloud and network for added security and speed, along with other security products including DDoS Mitigation and Office 365 Back-Up.
