

The shortest fiber route from Boston to Halifax

Offers low latency and true geodiversity so you can enhance reliability and grow your network with FirstLight's unique route.

Boston to Halifax

There is no such thing as too much diversity!

Network reliability and performance expectations have never been higher. As bandwidth demand continues to grow, mitigating exposure to long-haul network impairment and outage scenarios is an essential part of the capacity planning discipline. Ensuring your high-value transatlantic traffic reaches its destination is mission-critical and requires geodiversity to protect from congestion and out-of-service conditions. Unfortunately, there are no direct routes from Halifax to Boston – until now!

FirstLight designed a direct fiber route that ensures true path diversity, protecting your critical network infrastructure – so a fiber cut does not become a catastrophic outage. Avoiding common choke points and deliberately going “off the beaten path” of common throughways and railroad rights-of-way enables us to offer a geographically diverse alternative to traditional fiber providers. And these routes are interconnected to FirstLight's 650 central offices, giving you great flexibility in designing a connection across our 25,000-mile fiber network that is tailored to your needs.

Additional Unique Routes Include

-  **Lynn Landing to Boston**
-  **Boston to Albany**
-  **Montreal to Boston, New York or Newark**
-  **Cumulus Data Center, in Berwick, PA**
-  **Albany to New York**

Beyond Diversity

Having geographically diverse routes is key to a resilient network. So is having a nimble and flexible provider who will work with you to design, deploy, and quickly restore services if ever there is an issue. FirstLight is committed to transparency and accountability – from the consultant advising you on the best solution, to the local splicer who is always ready to ensure you have the best experience. Our state-of-the-art fiber network was built to be scalable and robust.

Boston to Halifax Route Highlights

- Shortest path between endpoints makes this the lowest latency route
- Ideal for transatlantic traffic landing in Halifax, NS
- Connect various Boston data centers to 132 Ketch Harbour Road, Herring Cove, NS B3V 1J4, CA
- In-region operations and repair team ready for fast deployment
- Dark fiber only
