

Better Connectivity. Better Patient Outcomes.

New tech advancements are transforming the delivery of care. Empowering providers and elevating patient experiences requires CIOs to embrace digital transformation and emerging innovations.

Your Investment

75%

of healthcare executives rate digital transformation as a critical priority.¹

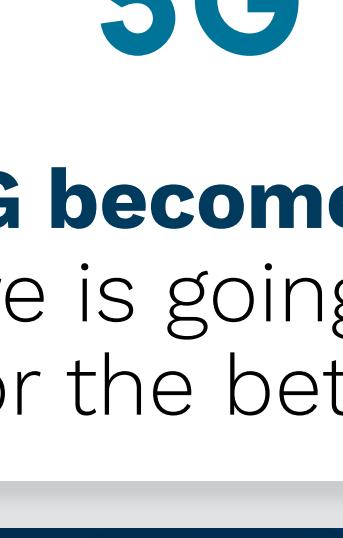

Security

\$9.8M

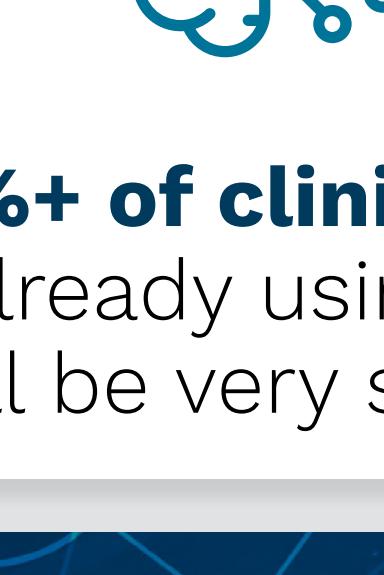

average cost of a data breach²

5G

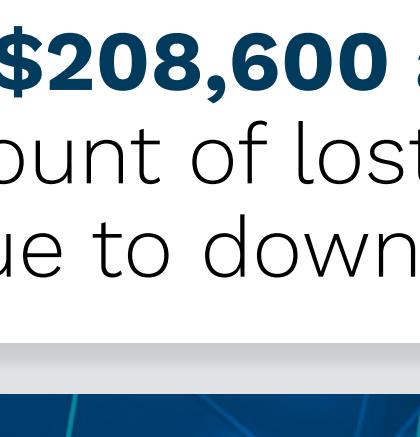

Where 5G becomes a reality, healthcare is going to change for the better³

AI

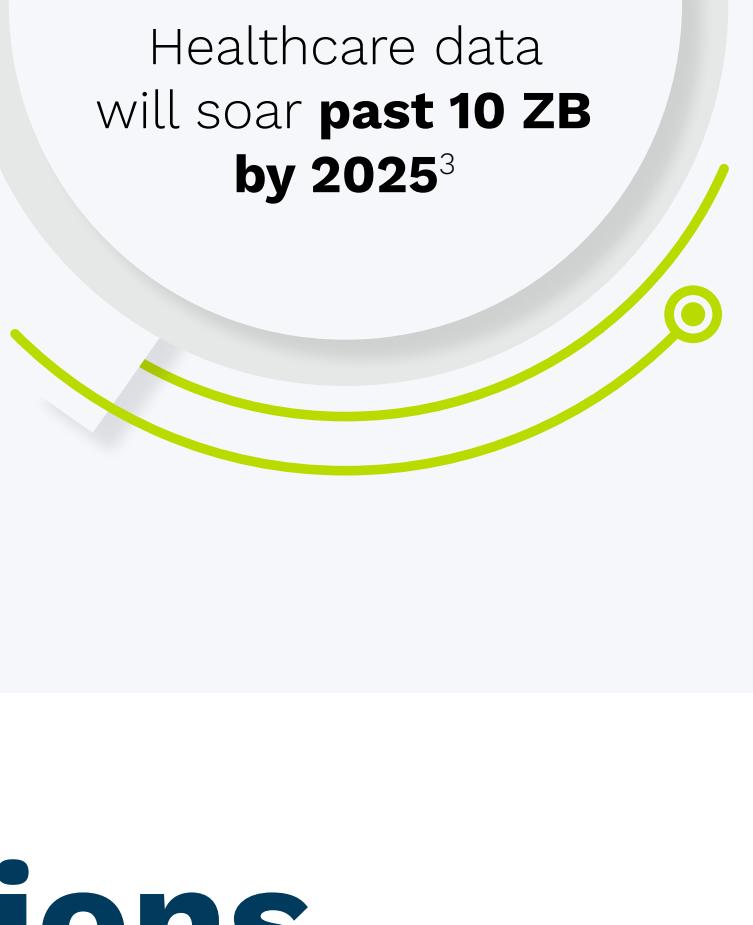

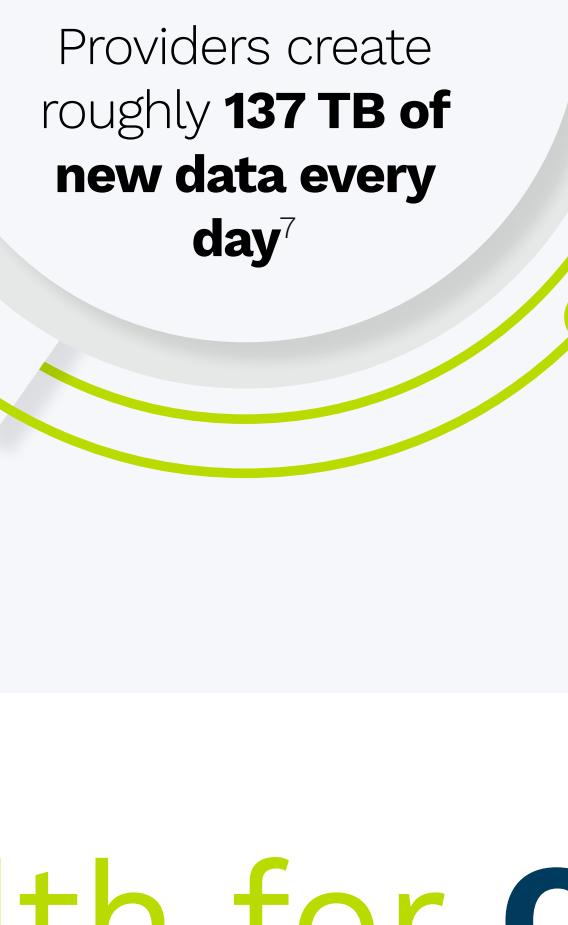

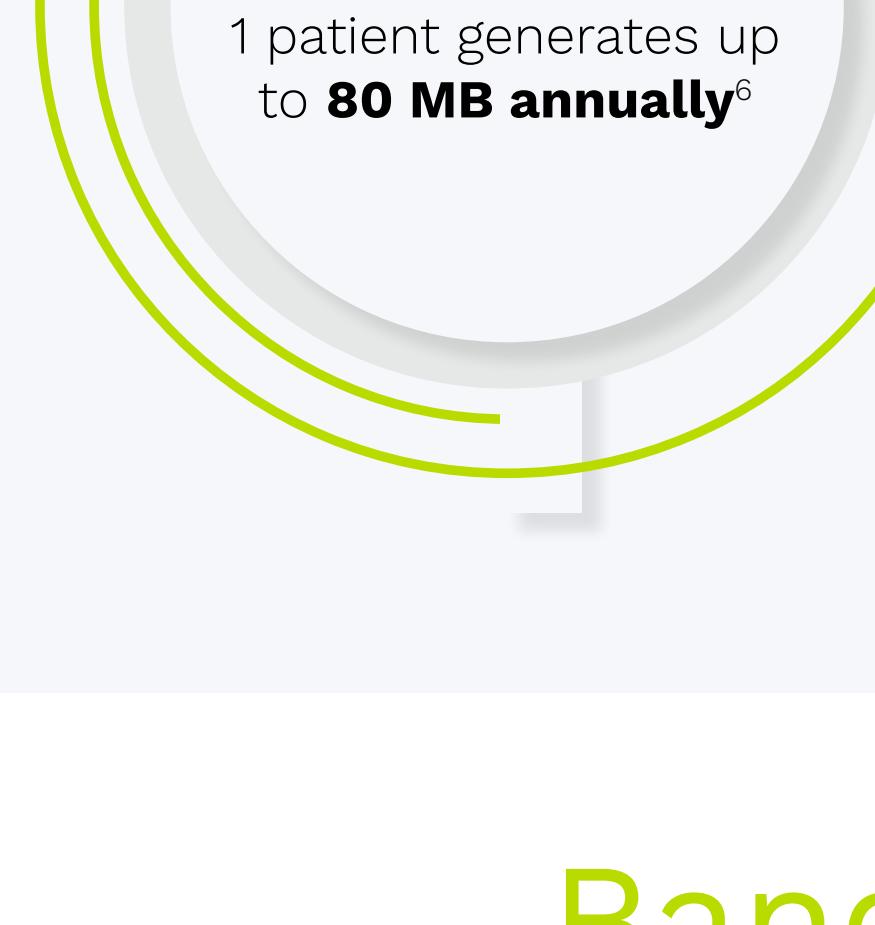

75%+ of clinicians are already using AI or will be very soon¹

Outages

\$208,600 avg. amount of lost profits due to down time⁴

Clinical Application Bandwidth Requirements

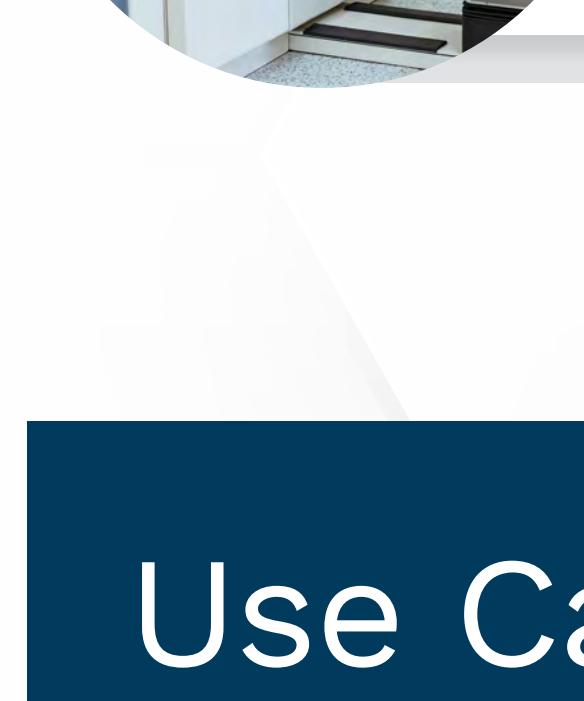

Bandwidth for Clinical Applications

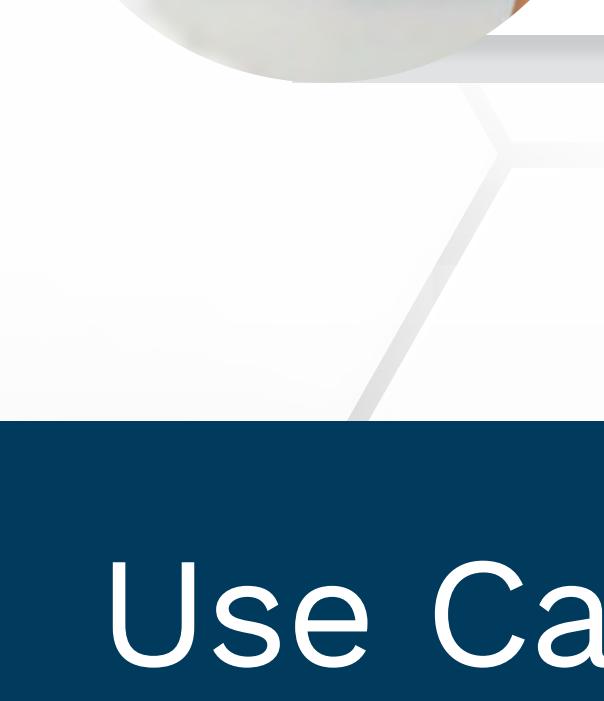

DBT images can range from **450 MB to 3 GB**⁸

A single CT scan data set can reach **up to 30 GB**⁸

~200 MB avg. cardiac MRI exam⁹

~20 GB avg. ViosWorks exam⁹

Use Case – Deliver Advanced Patient Care

Having **adequate bandwidth** positions local healthcare providers to deliver cutting-edge services that better serve patients.¹⁰

Use Case – Cost Savings

Virtualizing infrastructure functions can **cut IT costs by up to 30%** by reducing hardware needs, lowering power consumption, and extending network hardware lifespan.¹¹
