

## Guard Against Inappropriate Content

FirstLight now offers **FirstLight FilteredNet**, an affordable, dependable Internet plus content filtering service to its portfolio of high quality solutions.

Protect users from accessing inappropriate or dangerous content with FirstLight **FilteredNet**. This solution is specifically designed for libraries and educational institutions and powered by a sophisticated content filtering technology. Schools can allow students to explore the digital world with peace of mind knowing its Internet connections are protected with FirstLight **FilteredNet**.

FirstLight **FilteredNet** service can block inappropriate URLs or IP addresses as designated by the United States Department of Education (DOE). As changes to the list of restricted sites are made by the DOE, FirstLight **FilteredNet** makes real time updates to ensure that its configuration stays current. School administrators can access pre-configured reports to ensure compliance, and have the ability to independently make changes to FirstLight's configuration or, for an additional charge, work with our Advanced Technologies Group to adjust the configuration, based on the school's desire for open access.

FirstLight **FilteredNet** bundles FirstLight's high quality Internet service with content filtering to create a solution built to foster an optimal learning environment.

### Benefits
